Imaging Team, Specific Members of the Community (CC'ed),

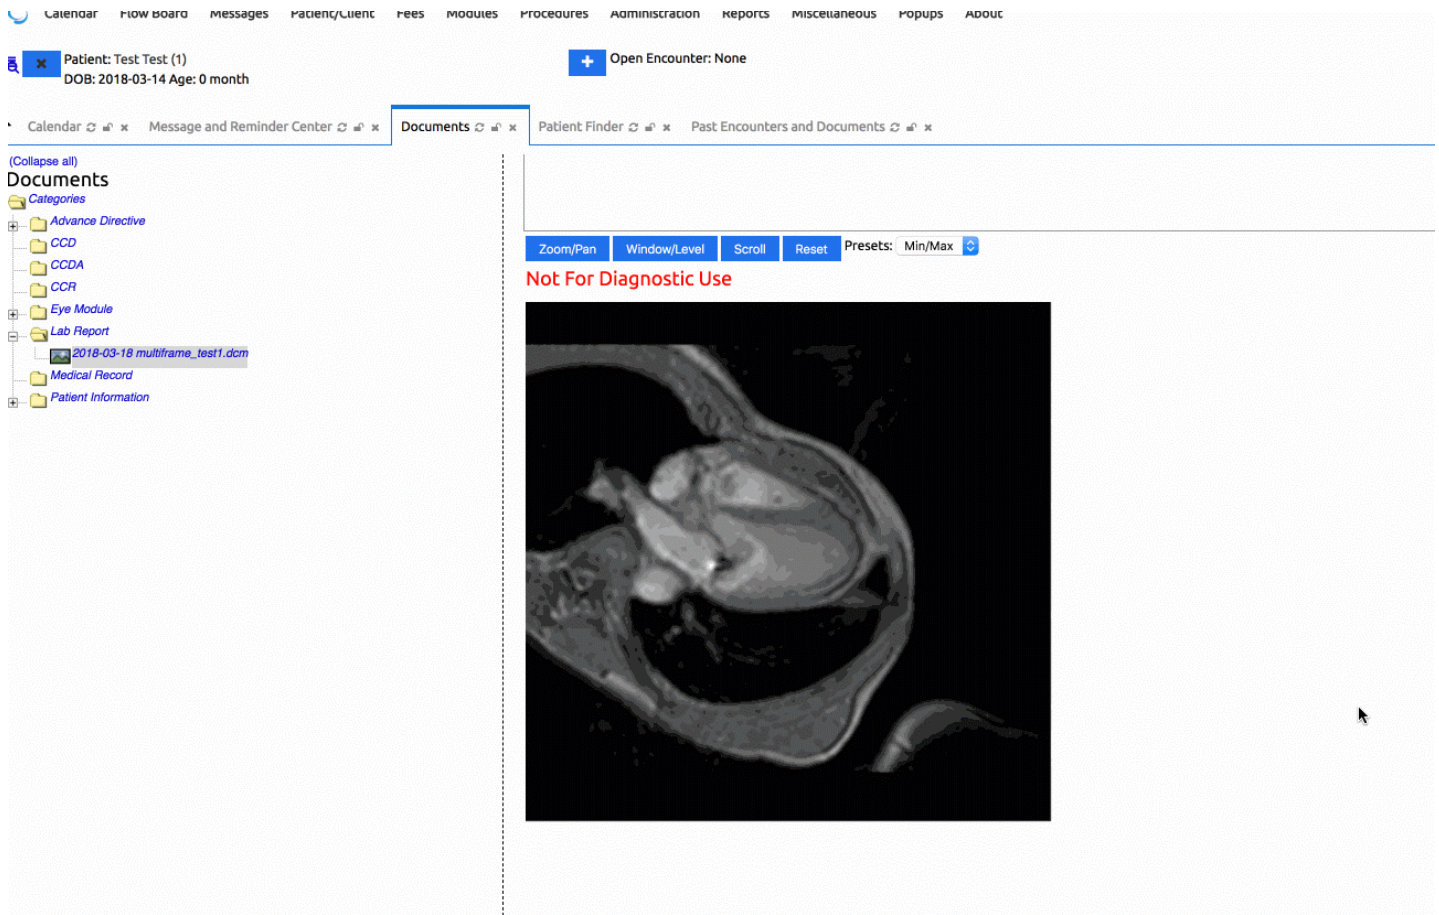

I am *beyond* excited to share that the v5.0.0.8 release branch <https://github.com/openemr/openemr/pull/1429> is coming along (*mainly thanks to Jerry and Brady filling in gaps I missed*).

Here's what I kindly need from you all:

1. Take one more look at the [associated press release](#) to ensure it is error-free/effective.
2. Let me know if you'd like to do some QA with me! I promise it's not very hard and everything can be easily **spun up** in a container. Always good to have a few sets of eyes here.

I'm hopeful this release will improve the EMR experience for existing/new users, attract a good amount of positive attention for our community, and serve as a major milestone for us and our imaging integration efforts (e.g.: the [2nd version](#) of this project).

See it in action (gif):
